ABSTRACT

In today's society, where individuals are busier than it has ever been, it is difficult for them to find time to work out or exercise on a regular basis by themselves. People have been going to the gym to get in shape, which is reasonable considering the importance of health and fitness. Immunity is a major element of one's life, and everyone wants to stay fit and healthy at all times. Now in most gyms, only a few individuals maintain track of everything, while others have a big marketplace for people. Someone started but soon left because exercising does not bring immediate results.

To maintain track of the gym, we offer a sale and member management system. Customers' health and establishment needs can be met efficiently with the use of a computerized system. It intends to gather information when the user accesses the system. Assisting in the maintenance of a competitive environment, including membership management and payment. This would result in a completely better approach towards the gym. This development program will ensure that every functionality performs as intended. A big respect to advanced technology, tools and systems which have a positive impact on citizens. Establishment process will be faster, records will be safe and secured.
