## **ABSTRACT**

A system to manage the activities of Vista Rent A Car is the goal of this project. The on-going paper based system has to be replaced with an automated system since the management finds it economic and effortless. This system will be used to reserve a car rental online as well as to set an appointment for Character Investigation (CI). All the basic essential information as name, address, mobile number as well as service offered chosen, are acknowledged from the customer and fed into the system. The system monitors the members account activity and keeps a record of it.

The main objective of the study is to determine how the "Online Car Rental Reservation System" may improve the transaction of the Vista Rent a Car. The study simulates the answer of the respondents. The respondents answer the following survey which deals with the speed and display of the system. The system may add extra expenses but in the long term the business will return its profit.

Based on the proponents study they conclude that the system is necessary to the Vista Rent a Car and it is best if being advertise in social networking sites.
